

Strata

Certification Testing Instructions · Version 1.0.2 · October 24, 2026

Publisher	Vestris LLC
App type	Microsoft Teams bot
Website	https://strata.playplay.io
Support	dblock@vestris.com

Purpose and prerequisites

Strata connects Strava with Microsoft Teams. It posts new Strava activities in a Teams channel and provides team leaderboards, statistics, maps, weather, and configurable units.

- Install the submitted app package in Microsoft Teams and add Strata to a team or channel.
- Use any existing Strava account, or create a free account at https://www.strava.com/register.
- No shared credentials, paid subscription, or payment method is required. Subscription enforcement is disabled during the beta.
- Allow a few seconds after creating an activity for the Strava webhook to deliver it to Teams.

> **Security note:** Reviewers should use their own Strava account. Vestris LLC does not request or provide shared passwords.

Core certification test

1. Confirm the bot responds

In a Teams channel where Strata is installed, send **@Strata help**.

Expected: Strata returns a help message listing its available commands.

2. Connect a Strava account

Send **@Strata connect**, select **Connect!**, sign in to Strava, and authorize Strata.

Expected: Teams displays a confirmation that the Strava account was connected.

3. Create a test activity

On strava.com, select **+** → **Manual Entry**. Enter an activity type, distance, and duration, then save it.

Expected: Within a few seconds, Strata posts the new activity to the Teams channel with activity details.

4. Test an activity with a route map

Download the sample GPX file. On Strava, select **+** → **Upload Activity** → **select file** → **Choose Files**, choose the GPX file, give the activity a title, and select **Save & View**.

Expected: Strata posts the activity in Teams with its route map and available activity details.

Additional functional tests

Command	Test	Expected result
leaderboard	Send **@Strata leaderboard**.	A team leaderboard is displayed.
stats	Send **@Strata stats**.	Team statistics for the past 30 days are displayed.
set	Send **@Strata set units metric**.	The channel unit preference changes to metric.
info	Send **@Strata info**.	General information about Strata is displayed.
subscription	Send **@Strata subscription**.	Current subscription information is displayed; no purchase is required for certification testing.
disconnect	Send **@Strata disconnect**.	The connected Strava account is unlinked.

Testing notes

- The bot supports personal, group chat, and team scopes. The primary certification scenario is a Teams channel.
- Activity data shown by Strata depends on the fields available from Strava. A manually entered activity does not include a route map.
- Weather is displayed only when weather data is available for the activity.
- Private activities are not synchronized by default.
- If a webhook post does not appear immediately, wait briefly and verify that the Strava activity was saved after the account was connected.

Cleanup

Send **@Strata disconnect** to unlink the reviewer's Strava account. The reviewer may also delete the test activity from Strava after validation.
